Education

York University Toronto, ON
Specialized Honours Degree, in Information Technology *Class of 2028*
- **CGPA**: 3.9 / 4.0, *Dean's List*

Seneca College Toronto, ON
College Diploma, in Computer Science *Class of 2024*
- **CGPA**: 4.0 / 4.0, *President's Honours List*

Experience

Software Engineer Intern May. 2026 – Aug. 2026
Evertz Microsystems *Burlington, ON*
- Utilized Python and REST APIs to automate media workflows for file ingestion, data extraction, media processing
- Optimized SQL queries across **1.7M**+ NBC media records, reducing query results by **87%** to improve processing time
- Assisted in planning NBC application infrastructure migration from on-premises to cloud environments across production
- Deployed L4 load balancing across production nodes, enabling failover and improving scalability for client infrastructure

IT Infrastructure Engineer Intern Sep. 2024 – Dec. 2024
Farber Debt Solutions *Toronto, ON*
- Enhanced security by managing user access in **Active Directory** (RBAC, MFA, compliance), reducing organization risk
- Developed data analysis to script to identify unused and perpetual software licenses, resulting in **$10,000** of savings
- Managed device setup, security, and compliance using Microsoft Intune to ensure secure devices across the organization
- Led organization-wide migration from Acrobat to PDF-XChange Editor, managing license rollout for **500+** employees

Software Developer Intern May. 2023 – Aug. 2023
Focus Optometry Centre *Mississauga, ON*
- Developed full-stack **MERN** website to improve the organization's digital presence through SEO-focused design
- Managed application deployment and DNS on **AWS (Elastic Beanstalk, Route 53)**, supporting **20+** daily users
- Automated appointment reminders using **AWS Simple Email Service (SES)**, reducing missed appointments by **50%**
- Built serverless API using **AWS API Gateway** and **AWS Lambda** to automate bookings and email notifications

Projects

Brickable | *Javascript, Rest API, Express JS, Mongo DB, PostgreSQL, EJS, AWS, JWT Encryption*
- Built a full-stack LEGO browsing web service using Node.js and Express, with a clean, server-rendered user interface
- Implemented JWT-based authentication and encryption to protect user sessions and secure API access for services
- Deployed the application using AWS Elastic Beanstalk and managed static asset storage with Amazon S3 bucket
- Hosted a production application at brickable.onrender.com, serving 5+ active users and 50+ products.

Assembly Line | *C++17*
- Engineered a multi-stage CLI assembly line simulation modeling sequential processing and controlled state transitions
- Utilized C++ multithreading and timing controls to coordinate concurrent processes and prevent race conditions
- Leveraged C++ features including references, templates, and explicit memory management for optimized performance

Gem Blitz | *Python, Py Game, Data structures & algorithms*
- Designed and developed Gem Blitz, a strategic Python game featuring an interactive Pygame-based user interface.
- Implemented AI opponent using minimax with alpha-beta pruning to evaluate game states and make optimal moves.
- Applied heuristic scoring and search optimizations to support multiple difficulty levels and responsive gameplay.

Technical Skills

Languages: C++, C, Python, Java, JavaScript (ES6+), SQL, Bash, MATLAB
Libraries & Frameworks: React, Node.js, Express, Flask, JUnit, Java Swing, Pandas, NumPy, Selenium
Cloud & DevOps: AWS (Lambda, API Gateway, EC2, S3, Elastic Beanstalk, SES, Route53), Azure (VMs, IAM), SaltStack
Security & Systems: Authentication and authorization (JWT, IAM concepts), secure API design
